Speed and clarity for the factory floor.

The Thinvent 15" Industrial Panel PC brings desktop-class responsiveness to demanding shop-floor and control-room environments. Powered by a 12th generation Intel Core i3-1215U processor, it keeps dashboards, SCADA screens and operator interfaces moving smoothly, even when several applications run side by side.

Where it earns its keep

- Production lines and machine control stations needing a dependable, always-on operator terminal
- Warehouse and logistics desks running browser-based warehouse management systems
- Kiosks and self-service points in busy public or industrial settings
- Control rooms displaying live process data, alarms and video feeds
- Remote support teams using VNC shadowing and RDP to assist operators without walking the floor

Why teams choose it

- Dual gigabit Ethernet lets you keep plant network traffic separate from office or internet traffic, a common requirement in industrial networks
- The 15 inch panel with 1024 × 768 resolution and 350 nits brightness stays readable under typical factory lighting, with wide viewing angles so operators can read it from the side
- Aluminium housing and passive cooling mean no moving parts to service, so it copes with dusty, hot environments where a standard office PC would struggle
- Thinux Embedded Linux comes ready with Chromium, Firefox, LibreOffice, Java, Python and SIP video, so you can deploy your application without hunting for drivers
- RS485 option and dual LAN make it straightforward to connect to legacy PLCs, sensors and industrial equipment
- 12V DC input with a 100 to 240V AC adapter simplifies installation wherever power is available

If you need a rugged, low-maintenance computer that runs your line software reliably shift after shift, this is the panel PC to specify.
