Big screen control, built for the factory floor.

The Thinvent 15" Industrial Panel PC puts a bright, wide-viewing display right where the work happens, driven by an Intel Core i3-1215U processor that keeps up with demanding production software.

Why it belongs on your line

- The 15 inch screen with 178° viewing angles stays clear from almost any position, so operators can read it without crowding the panel.
- Fanless passive cooling in an aluminium housing means fewer moving parts to fail and less downtime for maintenance.
- Dual gigabit Ethernet ports let you connect to both machine networks and plant systems at the same time.
- An optional RS485 port makes it straightforward to link with legacy industrial equipment and controllers.

- USB 3.2, HDMI and VGA give you room to add peripherals, secondary displays or data capture devices.
- No operating system preinstalled means you choose the software stack that fits your plant, without paying for licences you will not use.

Where it works

- Production line monitoring and machine control stations.
- Warehouse and logistics dashboards.
- Building automation and access control desks.
- Test benches and laboratory data terminals.

If you need a dependable panel computer that handles everyday industrial workloads without fuss, this is the one to specify.
