Big performance for the factory floor.

The Thinvent 15" Industrial Panel PC brings 12th generation Intel Core i7 muscle to your production line, control room or kiosk. With ten cores running up to 4.7 GHz, it handles demanding industrial software, multi-window dashboards and data-heavy applications without hesitation.

Why choose this panel PC

- Built for the shop floor. The aluminium housing and fanless passive cooling keep it working reliably in dusty, hot environments where ordinary computers struggle.
- See everything clearly. The 15 inch screen with 178 degree viewing angles means operators can read it from almost any position, while 350 nits of brightness keeps it legible under factory lighting.

- Connect your equipment directly. Dual gigabit Ethernet ports and an RS485 option make it straightforward to link with PLCs, sensors, scales and legacy machinery.
- Install it where you need it. The panel form factor suits machine mounting, production cells and self-service terminals alike.
- Runs your software, your way. Ships without an operating system so you can deploy the exact platform your applications require, with 4 GB RAM and a 128 GB SSD ready to go.
- Simple power. A 12V 5A adapter with a 2 metre cable gets you up and running quickly.

If you need a dependable industrial panel PC that keeps pace with modern automation software, the Thinvent 15" is ready for the job.
