Speed and reliability for the factory floor.

The Thinvent® 15" Industrial Panel PC brings desktop-class performance to environments where ordinary computers simply cannot cope. Powered by an Intel® Core™ i7-1255U processor with 10 cores, it responds instantly to demanding workloads, from live production dashboards to machine control and data logging.

Why choose this panel PC

- Built for the shop floor, not the office. Its aluminium housing and fanless passive cooling mean fewer moving parts to fail, so it keeps running shift after shift.
- One screen, many jobs. Dual Gigabit Ethernet lets you connect to both your control network and your business network at the same time, keeping operational data and reporting neatly separated.

- Connect your equipment directly. An RS485 option and dual USB 3.2 ports make it straightforward to link PLCs, sensors, scales and legacy machinery without extra adapters.
- See it clearly from anywhere. The 15 inch panel with 350 nits brightness and 178° viewing angles stays readable from wide positions across the line.
- Ready for your software. Shipped without an operating system, so you install exactly the platform your application needs, with 4 GB DDR4 RAM and 128 GB SSD storage already in place.
- Complete out of the box. A Thinvent® keyboard and mouse set is included, so commissioning starts the moment it arrives.

If you need a dependable panel computer that handles serious industrial workloads without fuss, this is the one to specify.
