Powerful performance in a rugged, compact package – the Thinvent Neo R/4 Mini PC.

Built for demanding industrial environments

- The 12th-gen Intel Core i5 processor delivers responsive, efficient computing for control systems, digital signage, or kiosk applications – without taking up valuable floor space.
- Its fanless, powder-coated steel housing shrugs off dust, vibration, and temperature swings, so it keeps running reliably on the factory floor or in a busy retail setting.
- With dual USB 3.2 and gigabit Ethernet, you can connect legacy peripherals and network equipment without adaptors, simplifying integration into existing infrastructure.

Why choose the Neo R/4

- It's a straightforward, no-frills workhorse: no operating system means you install exactly what your operation needs, reducing security risks and licensing costs.

- The 12V DC power input makes it ideal for mobile or vehicle-mounted installations where clean, low-voltage power is available.
- Small enough to mount behind a display or under a desk, yet robust enough to handle 24/7 duty cycles in harsh conditions.

Perfect for

- Industrial automation controllers and SCADA front-ends
- Self-service kiosks and ticketing machines
- Digital signage players requiring reliable, continuous operation
- Embedded systems where space is tight and downtime is not an option

Experience the dependability of purpose-built industrial computing – the Thinvent Neo R/4 Mini PC puts powerful processing where you need it most, with the durability to keep your operations running smoothly.
