Powerful computing that fits in the palm of your hand.

Built for the modern workspace where space is at a premium but performance is not: this Mini PC from Thinvent delivers the desktop-grade power you need for everyday business tasks, digital signage, or light data processing. With a 6-core AMD Ryzen 5 processor at its heart, it handles multitasking with ease – from running office suites to managing inventory systems or powering interactive kiosks.

Why choose this machine over a conventional tower? It is remarkably compact, so it tucks neatly behind a monitor, under a desk, or inside a wall-mounted display. That saves valuable desk space and reduces clutter. The fanless design (operating silently) means it is ideal for quiet environments like libraries, clinics, or open-plan offices. And with Ubuntu Linux 24.04 LTS pre-installed, you get a stable, secure, and virus-resistant platform that is perfect for custom applications or embedded use.

For IT managers, this Mini PC is a dream: it sips power, runs cool, and needs virtually no maintenance. The robust steel housing and powder-coated finish mean it withstands demanding industrial or public-facing environments. Plus, with full HD graphics output via HDMI and VGA, you can connect dual displays for increased productivity – great for surveillance monitoring or checkout systems.

Whether you are upgrading legacy hardware, building a thin client network, or need a reliable, cost-effective compute solution, the Thinvent Neo R/4 gives you genuine performance in a tiny, tough package. No compromise, just computing.
